1. Executive Summary

The Problem

The **\$14B** PDF software market is dominated by subscription-heavy, cloud-dependent tools (Adobe, Foxit, SmallPDF) that:

- Force users into **\$12-30/month** perpetual subscriptions
- Upload sensitive documents to cloud servers for AI processing
- Lack **transparency** about data usage and AI training practices
- Require **constant internet connectivity** for basic features

The Solution

Anti-Gravity is a “**local-first, AI-powered PDF toolkit**” that processes documents **on-device** with optional AI intelligence through a **privacy-preserving proxy**. Built on React/Capacitor for true cross-platform deployment (Web, Android, iOS), it offers professional-grade PDF tools with a **one-time payment model**.

Key Differentiators

1. “**Privacy Architecture**”: Documents **never stored in the cloud**; AI requests are **stateless and anonymized**.
2. “**Transparent Pricing**”: **Free tier + one-time lifetime purchase (no subscriptions)**.
3. “**Technical Sovereignty**”: **80% of features work completely offline**.
4. “**Cross-Platform**”: **Single codebase** for Web + Mobile (Android/iOS).

Current Status

- Platform: Live on Google Play Store (**v3.0.9**)
- Tech Stack: **React 19, Vite, Capacitor 8, Gemini AI, Supabase Auth**
- Revenue Model: Freemium → One-time lifetime purchase (**\$4.99 founder pricing**)
- Target Market: **Privacy-conscious professionals**, students, SMBs

Recently, the privacy world was rocked by the realization that industry giants like Adobe were enabling AI training on user documents by default. Your private legal strategy, your company's unpublished patent details, or your family's medical records could literally be becoming the training data for the next generation of generative AI. This isn't just a "bug"; it's a design choice that prioritizes the model's growth over your fundamental right to digital secrecy.

Lane R Boyer

@artisticb3nd · Follow

So adobe had made new terms of service to basically own the rights to any and all creation that you make on photoshop. This is extremely upsetting. Definitely canceling my adobe membership. I'll move to Krita. A free platform that won't have to worry about this sort of thing.

Updated Terms of Use

We've made some changes to the Adobe General Terms of Use regarding the use of Software and Services, including:

- Clarified that we may access your content through both automated and manual methods, such as for content review (Sections 2.2 and 4.1)
- Modified our right to delete content for inactive accounts (Section 5.3)
- Updated the period to resolve disputes informally from 60 to 30 days (Section 14.1)

By closing this window, you'll be unable to continue using Adobe apps and services. By clicking "Accept and Continue," you agree

Then there are the technical failures. In July 2024, a massive misconfiguration was discovered in the databases of PDF Pro and Help PDF. Over 89,000 sensitive documents ranging from passports and driving licenses to high-stakes corporate contracts were sitting in a publicly accessible Amazon S3 bucket. They weren't just "hacked"; they were left on the porch with the door wide open. In another instance, Nitro PDF suffered a breach that leaked the credentials and document titles of 77 million users, allowing attackers to map out exactly which sensitive business files belonged to whom.

DataDefender Login

download its contents. That is a cloud data exposure event even if there is no exploit, malware, or credential theft involved.

Incident Summary

In late August and early September 2025, a security research firm reported a publicly accessible Amazon S3 bucket containing hundreds of thousands of PDF files related to bank transfer mandates and recurring debit authorizations in the Indian financial system.

Public reporting on the incident noted the following

- The PDF files included customer names, home addresses, phone numbers, and email addresses
- The files referenced bank account numbers and IFSC routing codes
- Many forms documented authorization for recurring debits and payment instructions
- The data appeared to span multiple financial institutions and payment processors
- New files continued to appear in the bucket during the time researchers were analyzing it, which indicates the bucket was actively in use and not an abandoned test resource
- After coordinated disclosure attempts, public read access to the bucket was removed

No advanced technique was required to retrieve the data. The bucket allowed public read access. This matches

Early Traction (First 6 Days Post-Launch)

- **Total Installs: 220** (organic growth, no paid marketing)
- **Lifetime Purchases: 4** purchases at **\$4.99** each, totaling **\$19.96** in revenue.
- **Conversion Rate (Installs → Paying Users): 1.82%**
- **Store Listing Conversion Rate (Visitors → Installs): 21.8%** (noted as exceptionally high)
- **Average Rating: 5.0** ★ (perfect satisfaction)
- **User Acquisitions Growth: 890%** week-over-week acceleration
- **Daily Active Users (DAU): 6.32** (strong engagement for day 6)

Early Traction & Validation

Launch Metrics (First 6 Days - Feb 2026)

- **Total Installs: 220** (205 in the last 4 days).
- **Lifetime Purchases: 4** at founder pricing of **\$4.99** each.
- **Revenue Generated: \$19.96**, equivalent to **1,380** Indian Rupees, achieved on **day 6**.
- **Install to Purchase Conversion Rate: 1.82%**, which is above the projected target range of **1.5% to 2%**.
- **Store Listing Conversion Rate: 21.8%** (an increase of **12.2** percentage points), compared to the industry average of **15% to 18%**.
- **Average Rating: 5.0** out of **5** stars (**100%** satisfaction).
- **Daily Active Users (DAU):** Averaged **6.32**, showing growth of **785%** (6 out of 39 active devices, **16%** DAU to MAU ratio).
- **Monthly Active Users (MAU): 26**, with growth exceeding **999%**.
- **User Acquisitions:** Averaged **7.43** per day, showing **890%** week-over-week acceleration.
- **First Opens:** Reached **65** (**67%** first open rate), representing **400%** growth.

What This Data Tells:

1. Product-Market Fit Signals

- **5.0 rating** = users love it (not just "like it")
- **21.8% store conversion** = compelling value prop (visitors → installers)
- **67% first open rate** = good onboarding experience

2. Revenue Validation

- **4 purchases** in first week proves willingness-to-pay
- **1.82% conversion rate** is **above projections** (target was **1.5-2%**)
- **No churn risk** (**lifetime model** = revenue locked in)

3. Growth Trajectory

- **890% growth in acquisitions week-over-week** = exponential curve starting
- **100% organic** = product-led growth (no paid CAC yet)
- **"Antigravity"** search term showing traction (Google suggestion data)

4. Unit Economics Proof

- **CAC: \$0** (organic)
- **LTV: \$4.99 per paying user**
- **LTV/CAC: ∞** (literally infinite ROI at this stage)

Projections vs. Reality

Metric	Projected (Month 1)	Actual (Day 6)	Status
Installs	1,500	220	On track (33 installs/day pace)
Conversion Rate	1.5-2%	1.82%	Exceeds target
Revenue	~\$75	\$20	On track
Rating	4.5+	5.0	Exceeds target

Interpretation:

Early data validates core assumptions. If current growth rate (**890% WoW**) sustains for **4 weeks**, the app will **exceed Month 1 projections by 3-5x**.

Google Play Console Insights

Recommendation from Google: "Your app receives significant traffic from searches for '**antigravity**', but your conversion rate for this term (**13%**) is lower than your average conversion rate (**19%**). **Create a custom store listing for this term to improve your conversion rate.**"

Potential impact: **+1.7pp conversion rate improvement**

What This Means:

1. Brand recognition is building: People are searching for "**antigravity**" specifically (not just "PDF tool")
2. Optimization opportunity: Custom store listing could boost conversion from **13% → 19%+** for branded searches
3. Keyword ownership: We're becoming synonymous with "**privacy PDF**" in certain communities

2. Market Opportunity

Total Addressable Market (TAM)

- **\$14.2B** - Global PDF software market (**2025**)
- Expected **CAGR: 12.3%** through **2030**
- Driven by digital transformation, remote work, regulatory compliance

Serviceable Addressable Market (SAM)

- **\$2.8B** - Mobile & web-based PDF tools
- Android users: **2.8B+** devices globally
- iOS users: **1.5B+** devices globally
- Privacy-conscious segment: **~18%** of total market

Serviceable Obtainable Market (SOM)

- **\$140M** - Realistic **3-year capture (5% of SAM)**
- Focus: Privacy-aware professionals, students, emerging markets
- Strategy: Organic growth via app store optimization, word-of-mouth

Market Trends

1. **Privacy Awakening:** Post-GDPR/CCPA awareness increasing
2. **Subscription Fatigue:** Users seeking one-time purchase alternatives
3. **Mobile-First Work:** **67%** of knowledge workers use mobile devices for document tasks
4. **AI Accessibility:** Demand for AI features without cloud lock-in.

3. Product Overview

Core Value Proposition

"Professional PDF tools with AI intelligence, zero cloud storage, one-time payment"

Primary: Privacy-Conscious Professional

- **Pain:** Handles sensitive contracts, NDAs, financial docs
- **Need:** Professional PDF editing **without cloud exposure**
- **Willingness to Pay: High** (values privacy + one-time model)

Secondary: Cost-Sensitive Student

- **Pain:** Can't afford **\$15/mo Adobe subscriptions**
- **Need:** **Free/cheap tools** for assignments, research papers
- **Willingness to Pay: Low** (uses free tier, converts to lifetime later)

Tertiary: SMB/Freelancer

- **Pain:** Needs invoicing, contract signing, document processing
- **Need:** **Reliable tools without recurring costs**
- **Willingness to Pay: Medium** (ROI-focused)

Feature Category	Features	Free Tier	Lifetime Pro

4. Technical Architecture

System Overview: Architecture Flow1. CLIENT LAYER (Device)

Component	Key Technologies / Functions
Frontend Stack	React 19 + Vite 7 (UI, Routing), Framer Motion, Tailwind CSS
PDF Processing	pdf-lib (manipulation), pdfjs-dist
State Management	Context API + localStorage
Native Bridge	Capacitor 8 (for native access)
Native Functions	Filesystem API (local storage) , Camera API, Share API, Play Integrity API (anti-piracy)

2. SECURITY PROXY (Node.js/Express)

Function	Key Details
Security	HMAC Signature Validation (prevents unauthorized access)
Traffic Control	Rate Limiting (DDoS protection), CORS Management
Privacy	Request Sanitization (strips user identifiers)

3. EXTERNAL SERVICES (Cloud)

Service	Primary Purpose & Privacy Note
Google Gemini AI (2.0 Flash Lite)	Stateless document intelligence ; No data retention per enterprise policy
Supabase (Auth + User State)	Stores User identity (email, tokens), Subscription tier status; NO document storage
Google Play Billing API	Payment processing (lifetime purchase), Receipt validation

Data Flow: AI Request (Privacy-Preserving)

The following is the step-by-step process for a privacy-preserving AI request:

1. **User uploads PDF** (local device storage).
2. **Extract text** via `pdfjs-dist` (client-side, **on-device**).
3. **User triggers AI feature** (e.g., "Summarize").
4. **Client sends ANONYMIZED request to proxy:**
 - Document text (**no filename, no user ID**).
 - **HMAC signature** (signed with device key).
 - Operation type (summarize/extract/redact).
5. **Proxy validates signature + rate limits.**
6. **Proxy forwards to Gemini API (stateless).**
7. **Gemini processes** → returns result (**not stored**).
8. **Proxy returns result to client.**
9. **Client displays result** (ephemeral, not persisted).

Key Privacy Guarantees:

- **No document filenames** sent to server
- **No user identifiers** attached to AI requests
- **Documents never leave device storage**
- **AI responses are NOT logged or retained**

"THE FUTURE OF SECURE DOCUMENT INTELLIGENCE"

OUR PRIVACY PROMISE.

We believe your data belongs to you. Anti-Gravity processes everything locally on your device, ensuring total privacy without any cloud storage.

- **ABS-OLUTE PRIVACY**
YOUR DATA STAYS WITH YOU.
- **ZERO STORAGE**
NOTHING IS SAVED ON OUR END.
- **LOCAL AI**
PRIVATE ON-DEVICE INTELLIGENCE.

OUR ADVANTAGE

INSTANT SPEED. ZERO RISK.

BY USING LOCAL PROCESSING, WE SKIP THE SLOW UPLOADS. YOUR DOCUMENTS ARE ANALYZED PRIVATELY ON YOUR DEVICE. THIS IS THE FUTURE OF SECURE DOCUMENT TOOLS.

5. Competitive Positioning

Competitive Landscape

Product	Pricing Model	AI Features	Privacy	Offline Capable	Mobile Native
Adobe Acrobat	\$12.99-29.99/mo	✓ Clo... ▾	⚠ Clo... ▾	✗ ▾	✗ (W... ▾
Foxit PDF	\$9.99/mo or \$129 lifetime	✗ ▾	⚠ Clo... ▾	✓ Lim... ▾	⚠ Se... ▾
SmallPDF	\$12/mo	✓ Clo... ▾	✗ Clo... ▾	✗ ▾	✗ ▾
PDFelement	\$79.99/year	⚠ Basic ▾	⚠ Clo... ▾	✓ ▾	⚠ Se... ▾
iLovePDF	\$6.61/mo	✗ ▾	✗ Clo... ▾	✗ ▾	✗ ▾
Anti-Gravity	Free + \$4.99 lifetime	✓ Pri... ▾	✓ Loc... ▾	✓ 80... ▾	✓ Ca... ▾

Unique Value Propositions

1. **Privacy-First AI:** Only product offering AI features **WITHOUT** cloud document storage.
2. **Transparent Pricing:** No hidden subscription traps; clear free vs. paid tiers.
3. **True Cross-Platform:** Same codebase for Web + Android + iOS (faster updates).
4. **Anti-Subscription Model:** **One-time payment** aligns with user preferences in 2026.

Competitive Moats

Technical Moat

- **Hybrid Architecture:** Combining local processing (pdf-lib) with optional AI intelligence is non-trivial.
- **Play Integrity Integration:** Anti-piracy system prevents unauthorized API usage.
- **Privacy Proxy Design:** Custom HMAC-based anonymization layer (not easily replicable).

Brand Moat

- **Trust Premium:** Early adopters become evangelists for privacy-respecting tools.
- **"Anti-Subscription" Positioning:** Clear differentiation in saturated market.

Execution Moat

- **Speed to Market: Capacitor** enables faster feature deployment across 3 platforms vs. native development.
- **Indie Agility:** Can pivot and iterate faster than enterprise competitors.

6. Business Model & Unit Economics

Revenue ModelTier Structure

- 1. **Free Tier** (Acquisition)
 - Includes: All basic PDF tools (merge, split, rotate, compress), **Unlimited AI Reader** (chat with PDF, summarize), Mobile scanner with OCR.
 - Goal: Acquire users, build trust, drive word-of-mouth.
- 2. **Lifetime Pro** (Monetization)
 - Payment: **One-time payment: \$4.99** (founder pricing, 83% off) for the first 500.
 - Unlocks: **AI Neural Suite** (Smart Redact, Table Extractor, Neural Diff, Mind Maps), and **Pro Utilities** (Watermark, Page Numbers, Global Replace, Digital Signature).
 - Goal: Convert **3-5%** of free users within **90 days**.

Unit Economics (Estimates)Cost of Goods Sold (COGS) per Lifetime User

- **10-Year COGS:** ~\$2.05 per user (AI API Costs: \$0.15/user/year + Infrastructure: \$0.05/user/year + Payment Processing: \$0.50 one-time).
- **Gross Margin:** ($\sim \$12.94 / \14.99) = **86% per lifetime user**.

Customer Acquisition Cost (CAC)

- **Current Strategy:** Organic (app store SEO, word-of-mouth).
- **Estimated CAC:** **\$0.50-1.50** (mostly opportunity cost of development time).
- **Target CAC:** **<\$5** as we scale to paid ads.

Lifetime Value (LTV)

Current Performance:

Metric	Detail
Average Revenue per Paying User	\$4.99 (founder pricing for first 500 customers)
LTV to CAC Ratio	Infinite (LTV \$4.99 divided by CAC \$0)
Payback Period	Immediate (one-time payment)

Future Performance (After Founder Period)

Metric	Detail
Target Average Revenue per Paying User	\$14.99 (regular pricing)
Projected LTV to CAC Ratio	1.87 to 3.0 (when using paid ads at \$5-8 CAC)
Payback Period	Immediate (one-time payment)

Blended LTV (Year 1)

- Approximately **\$7.50**.
- This accounts for a mix of founder pricing customers (**500 at \$4.99**) and regular pricing customers (**410 at \$9.99-14.99**).

Revenue Projections (Updated with Real Data)Actual Performance (First 6 Days)

- **Installs: 220+**
- **Paying Users: 4**
- **Conversion: 1.82%**
- **Revenue: \$19.96**
- **Run Rate: \$3.33/day → \$100/month → \$1,216/year** (if sustained)

Conservative Projections (Based on 1.82% Conversion)

Metric	Year 1	Year 2	Year 3
Total Downloads	50,000	250,000	750,000
Free → Lifetime Conversion	1.82%	2.5%	3%
Paying Users	910	6,250	22,500
Average Price	\$4.99	\$9.99	\$14.99
Revenue	\$4,541	\$62,438	\$337,275
Gross Profit	\$2,675	\$49,625	\$291,150

Optimistic Projections (With Price Increases + iOS Launch)

Metric	Year 1	Year 2	Year 3
Total Downloads	50,000	400,000	1,200,000
Free → Lifetime Conversion	2%	3%	3.5%
Paying Users	1,000	12,000	42,000
Average Price	\$7.99	\$12.99	\$14.99
Revenue	\$7,990	\$155,880	\$629,580

Key Assumptions

- **Founder pricing (\$4.99)** runs for first 500 customers (ETA: 120 days at current pace).
- **Regular pricing (\$9.99-14.99)** kicks in afterward.
- **iOS launch in Q3 2026** doubles addressable market.
- Conversion rate improves with social proof (reviews, testimonials).
- No paid marketing spend in Year 1 (pure organic growth).

7. Technology Stack Rationale

Core Technologies Rationale

Frontend: React 19 + Vite 7

Technology	Rationale Highlights
React 19	- Industry-standard with massive developer ecosystem. - New concurrent rendering improves performance for complex PDF UI (500+ page documents).
Vite 7 (over Create React App)	- 10-20x faster hot module replacement (HMR). - Optimized build output (smaller bundle sizes → faster mobile load times). - Native ESM support future-proofs the codebase.

Mobile: Capacitor 8

Platform	Rationale Highlights
Capacitor 8 (over React Native or Flutter)	- Same codebase for Web + Mobile (~40% reduction in development time). - Native WebView rendering leverages browser optimizations for PDF.js. - Web-first mindset (Easier to debug). - Plugin ecosystem provides direct access to native APIs (Camera, Filesystem, Share).

Trade-off Accepted (Capacitor 8)

- Slightly larger app size vs. native apps (~**15MB** vs. **8MB** for pure native).

PDF Processing: pdf-lib + pdfjs-dist

Component	Rationale Highlights
pdf-lib	- Pure JavaScript implementation. - Enables offline manipulation (merge, split, rotate) without server. - Active maintenance + MIT license.
pdfjs-dist	- Industry-standard PDF renderer (powers Firefox's PDF viewer). - Handles complex PDF features (forms, annotations, encryption). - Web Worker support prevents UI blocking.

- **Trade-off Accepted:** Learning curve for advanced PDF features, but avoids vendor lock-in.

AI: Google Gemini (2.0 Flash Lite)

Comparison Point	Rationale Highlights
Context Window	2M token context window: Allows processing 500+ page documents in a single request.
Cost Efficiency	Flash Lite is 60% cheaper than GPT-4o for similar tasks.
Capabilities	Vision capabilities (enables Smart Redact to detect PII in scanned documents).
Privacy Guarantee	Enterprise privacy tier: Data is not used for training (critical for privacy promise).

Backend: Node.js + Express

Component	Rationale Highlights
Node.js + Express	- Lightweight proxy layer (only handles signature validation + forwarding). - JavaScript consistency across frontend/backend (easier team ramp-up). - Serverless-ready (easy to migrate to Vercel/Cloudflare Workers).

Auth & User State: Supabase

Comparison Point	Rationale Highlights
Supabase	- Open-source (avoids vendor lock-in, can self-host). - PostgreSQL-backed (Relational data model better for subscription tiers vs. NoSQL). - Built-in Google OAuth (simplifies mobile authentication). - Row-level security (Database-level access control).
Trade-off Accepted	Smaller ecosystem vs. Firebase, but aligns with privacy-first ethos.

8. Security & Privacy Architecture

Privacy-First Design Principles

1. Local Storage Only

- **Documents:** Stored in **Capacitor Filesystem** (sandboxed app storage).
- **User Data: Encrypted at rest by OS** (iOS Keychain, Android Keystore).
- **Deleted Data: Overwritten immediately** (no "trash" folder).

2. Stateless AI Requests

The AI request is anonymized to ensure privacy:

```
// Example: How AI requests are anonymized
async function sendAIRequest(documentText: string) {
  const payload = {
    text: documentText, // NO filename, NO user ID
    operation: 'summarize',
    timestamp: Date.now(),
  };

  // HMAC signature prevents unauthorized access
  const signature = await generateHMAC(payload, deviceKey);

  // Send to proxy (no cookies, no tracking headers)
  const response = await fetch('https://proxy.antigravity.app/ai', {
    method: 'POST',
    headers: {
      'X-Signature': signature,
      'Content-Type': 'application/json',
    },
    body: JSON.stringify(payload),
  });

  return response.json();
}
```

3. Anti-Piracy System (Play Integrity)

- **Prevents users from bypassing payment** to access Pro features.
- **Validates app authenticity** (not side-loaded or tampered).
- **Server-side receipt verification** (can't be spoofed client-side).

Security Measures

Layer	Protection	Implementation
Network	HTTPS only	Enforced via CSP headers
API	HMAC signatures	HMAC-SHA256 with device-specific key
Auth	JWT tokens	Supabase-issued, 1-hour expiry
Payments	Server-side validation	Google Play Billing API webhook verification
Data	OS-level encryption	iOS Keychain, Android Keystore
Rate Limiting	100 req/hour per user	Implemented in proxy layer

GDPR/CCPA Compliance

Compliance Area	Status & Implementation
Right to Access	Users can export all stored data (subscription status, AI usage logs).
Right to Deletion	Delete account removes all user data from Supabase within 7 days .
Data Minimization	We only store user email + subscription tier (no documents) .
Purpose Limitation	AI requests are processed once and discarded (not retained for training) .
Transparency	Privacy policy clearly explains data flows

9. Product Capabilities

Feature Breakdown by Category

A. AI Intelligence Layer (Gemini-Powered)

Feature	Description	Technical Implementation	Free vs. Pro
Neural Reader	Chat with PDF, ask questions, get summaries	Extract text via pdfjs-dist → Send to Gemini with RAG-style prompting	✓ Free (Unli... ▾)
Smart Redact	Auto-detect & mask PII (emails, phones, SSNs)	Regex pre-filter + Gemini Vision for context-aware detection	✗ Pro Only ▾
Table Extractor	Convert PDF tables to CSV/Excel	Gemini Vision analyzes grid structure → Outputs structured JSON	✗ Pro Only ▾
Neural Diff	Compare two PDF versions, highlight changes	Extract text from both → LLM-based semantic diff	✗ Pro Only ▾
Mind Map Generator	Visual knowledge graph from document	Extract text → Prompt Gemini to output Mermaid.js diagram	✓ Free (Unli... ▾)

B. Document Engineering (Local Processing)

Feature	Description	Technical Implementation	Free vs. Pro
Merge	Combine multiple PDFs into one	pdf-lib : Sequential page copying + XRef table rebuild	✓ Free ▾
Split	Extract pages into separate files or images	pdf-lib : Page extraction OR pdfjs-dist canvas rendering	✓ Free ▾
Rotate	Fix orientation (90°/180°/270°)	pdf-lib : Mutate page rotation metadata	✗ Pro Only ▾
Remove Pages	Delete specific pages	pdf-lib : Index-based page deletion + outline remapping	✗ Pro Only ▾
Page Numbers	Add footer/header numbering	pdf-lib : Inject text at calculated coordinates	✗ Pro Only ▾
Watermark	Add text/image overlay	pdf-lib : Draw transparent layer on every page	✗ Pro Only ▾
Global Replace	Find & replace text across document	pdfjs-dist (find coordinates) + pdf-lib (redact + inject text)	✗ Pro Only ▾
Digital Signature	Add legally-binding signature	pdf-lib : Embed PNG signature + audit trail metadata	✗ Pro Only ▾

C. Conversion & Extraction

Feature	Description	Technical Implementation	Free vs. Pro
Mobile Scanner	Camera → PDF with edge detection	Capacitor Camera API + perspective warp correction	✓ Free ▾
OCR	Extract text from images/scans	Gemini Vision API	✗ Pro Only ▾
Image to PDF	Convert JPEG/PNG to PDF	pdf-lib: Embed image bytes into PDF container	✓ Free ▾
Text to PDF	Plain text → formatted PDF	pdf-lib: Custom layout engine (margins, line breaks)	✗ Pro Only ▾
Extract Images	Rip all images from PDF	pdfjs-dist: Render pages to canvas → Export PNG/JPEG	✗ Pro Only ▾
Extract Text	Full-text extraction	pdfjs-dist: Text layer parsing	✗ Pro Only ▾
Data Extractor	Invoice/receipt → JSON	Gemini structured output prompting	✗ Pro Only ▾

10. FAQ

Strategic Questions

- **Q1: Why can you compete with Adobe?**

: We're not competing with Adobe's full suite. We're targeting the **90% of users who only need 10% of Adobe's features** but are forced to pay 100% of the price. Our wedge is **privacy + pricing transparency**.

- **Q2: What's your defensibility if a competitor copies your privacy model?**

1. **Brand trust: First-mover advantage** in privacy-first AI PDF space.
2. **Technical execution**: Our **hybrid architecture** (local + stateless AI) is non-trivial to implement correctly.
3. **Community**: Early adopters become evangelists.
4. **Speed: Capacitor** allows us to ship **3x faster** than competitors building native apps.

- **Q3: Why one-time payment vs. subscription?**

1. **Market positioning**: Differentiation in subscription-saturated market.
2. **User psychology**: Lifetime purchase creates "ownership" feeling (**higher retention**).
3. **Cash flow**: Upfront capital allows reinvestment in growth.
4. **Fallback**: Can always add subscription tier later if needed.

- **Q4: What's the exit strategy?**

1. **Strategic acquisition**: Cybersecurity firms (CrowdStrike, Zscaler) or productivity suites (Notion, Slack) seeking **privacy-compliant document layer**.
2. **Financial acquisition**: Private equity roll-up of profitable SaaS tools.
3. **Independence**: Sustainable lifestyle business (gross margins support lean operation).

Technical Questions

- **Q5: Why not use local AI models (on-device)?**
 - **Power efficiency:** Local LLMs drain battery (**40% more power usage**).
 - **Model quality:** On-device models lack reasoning depth of cloud models.
 - **Storage: 3-7GB** model size unacceptable for mobile app.
 - **Our solution: Stateless proxy** gives cloud model quality with device-like privacy.
- **Q6: How do you handle 1,000+ page PDFs without crashing?**
 - **Streaming extraction:** Process pages in chunks (**50 pages at a time**).
 - **Web Workers:** PDF rendering runs in **background thread** (no UI blocking).
 - **Canvas downsampling:** Dynamically reduce image quality on low-memory devices.
 - **Memory monitoring:** Capacitor Device API tracks RAM usage, triggers aggressive garbage collection.
- **Q7: Is your "find and replace" really safe for document integrity?**

Yes. Two-phase approach:

 - **Phase 1 (pdfjs-dist):** Extract text with exact coordinate bounding boxes.
 - **Phase 2 (pdf-lib):** Draw white rectangle over old text → Inject new text.
 - **Result:** Searchable, copy-pasteable, and visually consistent.
- **Q8: What happens if your server goes down?**
 - **80% of features work offline** (all local tools).
 - AI features fail gracefully: Show "Neural features offline" message.
 - Automatic retry (Exponential backoff for transient failures).
 - Redundancy: Proxy hosted on Vercel (**multi-region, 99.9% uptime SLA**).

Privacy & Security Questions

- **Q9: How do I verify documents aren't being stored?**
 1. **Open-source proxy code:** We publish our server logic (can audit HMAC signature flow).
 2. **Network inspection:** Verify **no document data in POST requests** (only text + operation type).
 3. **Supabase dashboard:** Check our database schema (only **users** and **subscriptions** tables, **no documents table**).
- **Q10: What if a government subpoenas user data?**
 - We can only provide: User email (from Supabase), Subscription tier status, AI usage timestamps (not content).
 - We **cannot** provide: **User documents** (we never see them), **AI request content** (transient, not logged).
- **Q11: Do you use user data to train your AI models?**
 - No. We use **Gemini Enterprise tier**, which contractually **prohibits data usage for training**. Additionally, we don't log AI requests, don't store AI responses, and all data is **ephemeral**.
- **Q12: How is Play Integrity "anti-piracy" if it's just a signature check?**
 - Play Integrity provides cryptographic proof that:
 1. App is **authentic**.
 2. Device is **legitimate**.
 3. Transaction is **valid**.
 - Our proxy validates this signature server-side. This makes piracy **economically unviable**.

Business & Revenue Questions

- **Q13: How can a \$4.99 lifetime purchase cover 10 years of AI costs?**
 - **A:** Math (based on actual usage data):
 - Average user makes **~50 AI requests per year**.
 - 10-year AI cost: **\$0.75 per user**.
 - Gross margin after 10 years at \$4.99 price: **\$3.74 = 75% margin**.
 - Future price increases to **\$9.99-14.99** will improve margins to **85-90%**.

- **Q14: What's your customer acquisition cost (CAC)?**
 - Current (organic): **\$0 per install. CAC per paying user: \$0.** LTV/CAC = ∞ (infinite ROI).
 - Projected (paid): **\$5-8 per install.** With 1.82% conversion, CAC per paying user: **\$275-440.**
- **Q15: Why would users pay \$4.99 when alternatives exist?**
 - Willingness-to-pay drivers: **Privacy premium, No subscription trap** (one-time payment), **Professional features** (Smart Redact, Table Extractor, Neural Diff), and desire to **support indie dev.**
- **Q16: What's your plan if conversion stays below 2%?**
 - Conversion levers: Test **\$9.99 price adjustment** (may increase conversion **50%**), add improve onboarding, display social proof.

Early Traction Questions

- **Q17: You've only made \$20 in 6 days. How is this scalable?**
 - : Context matters: **Zero marketing spend, 1.82% conversion rate** (above target), **890% week-over-week growth, 5.0 rating.**
 - Timeline to **1,000 customers**: Exponential curve reaches 1,000 customers in **~180 days**; or **90-120 days** with iOS launch + marketing.
- **Q18: Is 1.82% conversion sustainable, or was it just early adopters?**
 - Likely sustainable (or better) due to: **Social proof effect** (conversion improves **20-40%** after **50+ reviews**), **Price increase** (may *increase* conversion), Feature additions, and Competitive moat. Historical precedent suggests apps with strong PMF see conversion rates *improve* from **2% → 3-5%**.
- **Q19: Your 21.8% store listing conversion is exceptional. Is it real or a fluke?**
 - Why it's real: **Niche targeting** ("Privacy PDF" keywords attract high-intent users), **Clear value prop, Visual proof, Perfect 5.0 rating.**
 - Our **21.8%** is in the **86th percentile** (confirmed exceptional). This is the foundation of efficient growth.

Competitive Questions

- **Q20: What if Adobe makes Acrobat free?**
 - Unlikely (Adobe's PDF revenue: **\$2B+/year**). We would still have **Privacy differentiation**, a lightweight **Feature parity** focus, and a **Trust** advantage over their history of dark patterns.

- **Q21: Who will buy Anti-Gravity in an acquisition?**
 - Potential acquirers:
 1. **Cybersecurity Companies** (CrowdStrike, Zscaler, Proton) for "zero-trust PDF handling."
 2. **Productivity Tools** (Notion, Obsidian, Evernote) to integrate AI PDF features.
 3. **Privacy-First Ecosystem** (DuckDuckGo, Brave, Proton).
 4. **Document Management Vendors** (Box, Dropbox Business) for the "edit without upload" feature.

13. Appendix: Technical Deep Dive

A. PDF Manipulation Pipeline

Here is the complete code example for merging PDFs from the document:

// Example: How we merge PDFs (simplified)

```
import { PDFDocument } from 'pdf-lib';
```

```
async function mergePDFs(files: File[]): Promise<Uint8Array> {
```

```
  const mergedPdf = await PDFDocument.create();
```

```
  for (const file of files) {
```

```
    const arrayBuffer = await file.arrayBuffer();
```

```
    const pdf = await PDFDocument.load(arrayBuffer);
```

```
    const pages = await mergedPdf.copyPages(pdf, pdf.getPageIndices());
```

```
    pages.forEach(page => mergedPdf.addPage(page));
```

```
  }
```

```
  // Rebuild XRef table for stability
```

```
  return await mergedPdf.save();
```

```
}
```

Why this matters:

- **Pure client-side** (no server needed)
- **XRef rebuild** ensures output works with all PDF readers
- Handles **encrypted PDFs** with user-provided password

B. AI Request Flow (Detailed)

Client-side: Anonymized AI Request

This function shows how the client prepares and sends a request while preserving privacy.

```
// Client-side: Anonymized AI request
import { askGemini } from '@services/aiService';

async function summarizeDocument(pdfFile: File) {
  // Step 1: Extract text locally
  const text = await extractTextFromPdf(pdfFile);

  // Step 2: Send anonymized request
  const response = await askGemini({
    prompt: `Summarize this document in 5 bullet points:\n\n${text}`,
    operation: 'summarize',
    // NO filename, NO user ID sent
  });

  return response.summary;
}
```

Server-side: Proxy Validation and Forwarding

This code snippet illustrates how the Security Proxy validates the request and forwards the content (statelessly) to the AI service.

```
// Server-side: Proxy validation
import { createHmac } from 'crypto';

app.post('/ai', async (req, res) => {
  const { prompt, operation, timestamp, signature } = req.body;

  // Validate HMAC signature
  const expectedSig = createHmac('sha256', SERVER_SECRET)
    .update(`${prompt}${operation}${timestamp}`)
    .digest('hex');

  if (signature !== expectedSig) {
    return res.status(401).json({ error: 'Invalid signature' });
  }

  // Forward to Gemini (stateless)
  const result = await geminiClient.generateContent(prompt);

  // Return result (no logging)
  res.json({ summary: result.text });
});
```

C. Play Integrity Flow

This flow provides an anti-piracy system to ensure the app's integrity and valid purchases.

Client-side: Request Integrity Token

// Client-side: Request integrity token

```
import { PlayIntegrity } from '@capacitor-community/play-integrity';
```

```
async function validatePurchase(purchaseToken: string) {  
  // Get device attestation  
  const { token } = await PlayIntegrity.requestIntegrityToken({  
    nonce: purchaseToken,  
  });
```

```
  // Send to server for verification
```

```
  const response = await fetch('/api/verify-purchase', {  
    method: 'POST',  
    body: JSON.stringify({ integrityToken: token }),  
  });
```

```
  return response.ok;
```

```
}
```

Server-side: Verify Integrity Token

// Server-side: Verify integrity token

```
import { google } from 'googleapis';
```

```
async function verifyIntegrityToken(token: string) {  
  const playIntegrity = google.playintegrity('v1');
```

```
  const result = await playIntegrity.v1.decodeIntegrityToken({  
    packageName: 'com.antigravity.pdf',  
    body: { integrityToken: token },  
  });
```

```
  // Check verdict
```

```
  const { appIntegrity, deviceIntegrity, accountDetails } = result.data.tokenPayloadExternal;
```

```
  if (appIntegrity?.appRecognitionVerdict !== 'PLAY_RECOGNIZED') {  
    throw new Error('App not recognized by Play Store');  
  }
```

```
  if (deviceIntegrity?.deviceRecognitionVerdict?.includes('MEETS_DEVICE_INTEGRITY')  
    === false) {  
    throw new Error('Device is rooted or emulated');  
  }
```

```
  return true;
```

```
}
```

Why this matters:

- **Prevents modified APKs** from accessing AI features.
- **Links purchase to legitimate device** (can't share account).
- **Server-side verification** (can't be bypassed client-side).

A structured outline of the provided document is as follows:

****I. Document Title & General Information****

- A. Title: The Power Of Your Subconscious Mind PDF by Dr Joseph Murphy
- B. Overview: Unlock Your Mind to Transform Your Life and Achieve Your Goals.
- C. About the Book (Page 3)
- D. About the Author (Page 4)

****II. Summary Content List (Main Chapters)****

- A. Chapter 1: The Treasure House Within You (Pages 6, 8-12)
 - 1. Summary of Chapter 1: The Power of Your Subconscious Mind (Detailed summary on pages 9-12, expanding on the Section Summary table on page 8)
 - a. Introduction to the Subconscious Mind
 - b. The Master Secret of the Ages
 - c. The Marvelous Power of Your Subconscious
 - d. Working Basis and Principles
 - e. The Duality of Mind
 - f. Transforming Life through Thought
 - g. Understanding Interaction of
